

Integrated Catchment Management Training

Eligible professionals working in the built environment in Wales have the opportunity to attend **free** training in managing natural resources using Integrated Catchment Management (ICM).

The course will equip you with a comprehensive understanding of the design, planning and engagement activities required for effective implementation of ICM approaches. You will leave with a toolkit of techniques to enable you to work in line with the emerging Welsh Government water strategy as well as deliver ICM solutions in your day to day role.

The courses will deliver 20 learning hours over a 5 week period in March/April with a mixture of webinars, flexible e-learning and a workshop (venues in north, south-east and south-west Wales). Successful completion of the course will lead to CQFW Level 4 accreditation and CPD certification. Places are limited and allocated on a first come first served basis.

For further information and to register your interest please visit
